

Glenn Medical Center would like to thank the Glenn Medical Foundation, the donors and volunteers for the 8th Annual Splendor in the Valley Evening Under the Stars Gala.

Your support will help purchase a Centaur, an immunoassay system capable of performing 180 laboratory tests an hour. Its test menu has

over 50 tests, including testing for Infectious Diseases, Reproductive Endocrinology, Tumor markers, Anemia, and Thyroid Function. With the addition of this analyzer, Glenn Medical Center will initially expand their test menu to include such testing as Vitamin B12, Folate, and Vitamin D, with the potential to add more as the demands increase. By performing these tests in-house, we will greatly improve our turnaround time and the level of service we provide patients and physicians.

Your support makes a difference!

Caring for you and our Community
